

## **Amendments to the Claims**

This listing of claims will replace all prior versions, and listings, of claims in the application:

### **Listing of Claims:**

Claim 1 (previously presented): A cooling roll stand comprising:

a device for applying a liquid mixture of a silicone oil concentrate and at least water to a web-shaped printing material, the device having:

- a reservoir for the silicone oil concentrate,
- a supply source for the water,
- a mixing tank for the silicone oil concentrate and the water,
- an applicator for transferring the liquid mixture onto the printing material, the applicator having at least one container for the liquid mixture, and
- a buffer tank for the silicone oil concentrate separated from the mixing tank, the buffer tank receiving the silicone oil concentrate from the reservoir; and
- a cooling roll for the web-shaped printing material.

Claim 2 (original): The device as recited in claim 1 wherein the device further includes a supply line from the buffer tank to the mixing tank and a valve in the supply line operated by a control unit and/or regulating unit so that a continuous, or quasi-continuous, or intermittent flow of the silicone oil concentrate is produced.

Claim 3 (original): The device as recited in claim 2 wherein the device further includes a second supply line from the supply source to the mixing tank, and a second valve in the second supply line operated by the control unit and/or regulating unit so that a continuous, or quasi-continuous, or intermittent flow of the water is produced.

Claim 4 (original): The device as recited in claim 2 wherein the applicator has a float element or a fill level sensor connected to the control unit and/or regulating unit for signal transmission and/or data transmission as a function of a fill level.

Claim 5 (original): The device as recited in claim 1 wherein the container of the applicator is designed as a trough, and the applicator includes an applicator roll transferring the liquid mixture from the trough onto the printing material.

Claim 6 (original): The device as recited in claim 5 wherein the device further includes a motor, and the applicator roll is driven by the motor, the motor being controlled and/or regulated by a control unit and/or regulating unit in such a way that the rotational speed of the applicator roll is modifiable.

Claim 7 (original): The device as recited in claim 1 wherein the mixing tank has a smaller volumetric capacity than the buffer tank.

Claim 8 (original): The device as recited in claim 7 wherein the mixing tank has a volumetric capacity of approximately one liter and the buffer tank has a volumetric capacity of approximately ten liters.

Claim 9 (canceled).

Claim 10 (canceled).

Claim 11 (canceled).

Claim 12 (canceled).

Claim 13 (canceled).
